Calculations

The rankings in this report only reflect the frequency of crashes and not the rate of crashes. By using the number of crashes in conjunction with the average daily traffic through the intersection an Intersection Crash Rate may be calculated. As outlined in the Fifth Edition of the Traffic Engineering Handbook a rate per million entering vehicles can be calculated. This number can be used to give a more useful comparison of intersection crashes. Below is a comparison of the top ten intersections by both frequencies of crashes and by crash rate.
