

Crews from the Eastern Division of the Hamilton County Engineer's Office recently constructed reinforced concrete drilled shaft retaining wall along 65' of Nodyke Road. The site is located between the Woodland Mound Park entrance and Hopper Hill Road in Clermont County. This section of Nodyke Road has experienced substantial movement recently. The Engineer's Office intends to continue correcting sections in this area annually as resources allow. The project was completed during a road closure October 8th through the 16th.
