

# PARKING LOT SURFACE DETENTION REQUIRED STORAGE CONTROL

Refer to exhibit 34 sheet 1 of 5 (apply similar design criteria for outlet control devices for this structure).

PLAN

PROFILE

## NOTES:

1. CB (catch basin) frame and grate to be heavy duty and use bicycle safe grate.
2. Emergency overflow ditch may be omitted if there is no danger of erosion or flooding occurring in the event of plugging to the orifice.
3. In special cases, usually where the adjacent off site geography is almost flat and a minor size detention facility is required, a weir opening instead of the catch basin and outlet pipe may be used for outlet control.
